DIN rail power supply unit, primary-switched mode, 1-phase, output: 48 V DC / 10 A

Product description

QUINT POWER 48 DC is a universal power supply unit of 240 W ... 960 W. In case of a regulated and adjustable output voltage of 30 V DC ... 56 V DC, output currents of 5 A, 10 A and 20 A are available.
The devices are built as primary switched-mode controllers and have a high degree of efficiency, due to which the heat loss is limited to a minimum. The high operational safety is guaranteed reliably in unstable global networks as well. QUINT POWER also functions in applications where static voltage dips, transient failures of the supply voltage unit or phase failure are to be expected.
Generously dimensioned capacitors guarantee a mains buffering of more than 20 ms under full load. All three-phase QUINT POWER provide full output power, even in the event of a long-term phase failure.
A reliable starting of complex loads is ensured by a power reserve of up to 50% – the POWER BOOST.
A preventive function monitoring diagnoses improper operating states and minimizes downtimes in your system. For remote monitoring of this state, an active transistor switching output and a floating relay contact are available.
