

i TE1120 | TC3 XCAD Interface

TC3 XCAD Interface serves the purpose of importing already existing engineering results from an ECAD program. The TC3 XCAD Interface enables the import of information about the structure of the I/Os and their links to PLC variables, which is exported from the ECAD tool by means of XML description. On the basis of this information a system manager configuration and a basic PLC program with the I/O variables used are generated. The generation of NC and CNC axes is also possible.

Technical data	TE1120
Target system	Windows XP, Windows 7
Ordering information	
TE1120	TC3 XCAD Interface
i Product announcement	estimated market release 2nd quarter 2015
