**Functional principle**

Ultrasonic sensors capture a multitude of objects contactlessly and wear-free with ultrasonic waves. It does not matter whether the object is transparent or opaque, metallic or non-metallic, firm, liquid or powdery. Even environmental conditions such as spray, dust or rain hardly affect their function.

The sonic cone diagram indicates the detection range of the sensor. In accordance with standard EN 60947-5-2, quadratic targets in a range of sizes (20 x 20 mm, 100 x 100 mm) and a round rod with a diameter of 27 mm are used.

Important: The detection ranges for other targets may differ from those for standard targets due to the different reflection properties and geometries.

## Retroreflective Sensor

#### Mounting instructions/Description

#### Teaching the reflector position

The ultrasonic sensor features a switching output with a teachable switching range. The green and yellow LEDs indicate whether the sensor has detected the object.

A switching range is taught in. This must be within the detection range. In this operating mode, the taught reflector position is detected permanently without an object.

#### Easy-Teach

- Connect the teach adapter TX1-Q20L60 between the sensor and connection cable
  - Stationary reflector within the detection range
  - Press and hold button for at least 2 s against Gnd
- After a successful teach-in, the green LED flashes at 3 Hz and the sensor runs automatically in normal mode.
- To invert the output function, press and hold the button against the Ub for 2...7s

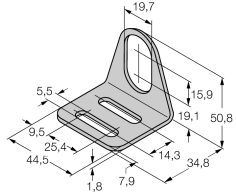

#### LED response

In standard operating mode, the two LEDs indicate the switching state of the sensor.

- Green: reflector within the detection range
- Yellow: object between the sensor and reflector
